

Baltimore City is a center of both population and economic activity. The City is home to nearly 637,000 residents who are a major source of labor for businesses in the City, region and State. The City is also a major center of economic activity and is home to over 20,000 businesses and nearly 293,500 employees. The current economic recession has impacted both the State and the City, with the State's 2009 unemployment rate at 8.0% and the City's unemployment rate at 12.8%. The Bureau of Labor Statistics reported Maryland's September 2010 unemployment rate at 7.3% and Baltimore City's rate at 11.0%. Businesses have also suffered, with employee layoffs and closures.

BNIA-JFI tracks fifteen workforce and economic development indicators that measure the importance of and role of the City as both a major source of labor and as a center of economic activity. These indicators are grouped into the following categories: labor force participation and employment; educational attainment; commercial investment activity; and businesses and successful small businesses. Currently, the labor force and educational attainment data is only available at the City level. Currently, American Community Survey data is available at smaller areas, but released as multi-year averages. Business data is purchased from InfoUSA and is available at the address level, which can be aggregated to the CSA level for Vital Signs. It is still important to note that the firm level data from InfoUSA is best to be analyzed at the City level since due to methodology issues, individual level firm data can be problematic to analyze. Highlights of the workforce and economic development indicators tracked by BNIA-JFI are described below.

### **Labor Force Participation and Employment**

BNIA-JFI collects four indicators of labor force participation and employment. These indicators include the percentage of the population that is employed, the percentage of the population that is unemployed and looking for work, the percentage of the population not in the labor force, and the unemployment rate. These indicators provide a picture as to the workforce characteristics of Baltimore City residents. This data comes from the Census and the American Community Survey. Small area population data, such as labor force and employment statistics is available from the American Community Survey using multi-year averages. In 2009, there were 28,376 persons who were unemployed in Baltimore City.

- Consistent with the current recession, the percentage of persons in Baltimore City that are unemployed increased three percentage points from 9.8% in 2008 to 12.8% in 2009.
- The percentage of persons in Baltimore City between the ages of 16 and 64 that are employed increased from 57.3% in 2008 to 60.4% in 2009.

## Educational Attainment

BNIA-JFI tracks two educational attainment indicators collected from the Census and American Community Survey: (1) the percentage of the population with a high school degree; and (2) the percentage with at least some college education. These measures of education attainment are important because in today's increasingly complex economy, most jobs require at least a high school level of education and an increasingly jobs number require additional a bachelors degree or above. . Baltimore's population has experienced an increase in educational attainment and since 2000, with both the percentage of residents with a high school degree and those with at least some college education increasing. This increase may be due to a combination of an increasing number of residents graduating from school and also from the new resident in migration to Baltimore City that have a higher level of educational attainment.

- From 2000 to 2009, there was a slight improvement in the number of persons (aged 25 and above) that have a high school diploma (29.4% to 30.6%).
- The percentage of City residents with at least some college education (aged 25 and above) increased from 45.1% in 2000 to 53.4% in 2009.

## Commercial Investment Activity

Businesses of all types have been impacted by the recession. BNIA-JFI tracks two indicators of commercial investment activity: the total number of commercial properties; and the percentage of commercial properties that apply for and receive a rehabilitation permit (a measure of business investment in real estate). The number of commercial properties in Baltimore City has decreased and fewer businesses are applying for and receiving rehabilitation permits. Data for commercial businesses comes from the Baltimore City Department of Housing and Community Development.

- The number of commercial properties in Baltimore City declined slightly from 16,533 in 2008 to 16,480 in 2009.
- The percentage of commercial properties that applied for and received a rehabilitation permit of greater than \$5,000 decreased slightly from 13.3% in 2008 to 12.9% in 2009.

## Businesses and Successful Small Businesses

BNIA-JFI tracks seven indicators of business activity and of successful small businesses. These indicators include: the total number of businesses, total employment; total retail sales; the number of businesses with fewer than 50 employees; the number of businesses with between 50 to 100 employees; the percent of businesses over four years old; and the percent of businesses with 50 or fewer employees that are more than four years old. BNIA-JFI uses data from InfoUSA, a national marketing firm. Previously, BNIA-JFI used data collected from Dun and Bradstreet. As a result of the change in data sources, long term

comparisons of the data between years are not comparable. Highlights of the data for Baltimore City include the total number of businesses and the total number of persons employed in Baltimore City decreasing from 2008 to 2009.

- Of the approximately 20,000 businesses in Baltimore City in 2009, 14.7% are located in the Downtown/Seton Hill CSA and 5.7% are located in the Midtown CSA.
- In 2009, there were approximately 293,500 persons employed by businesses in Baltimore City. These persons include both City residents and persons who live outside of Baltimore City. This is a decrease of more than 10,600 persons employed or 3.5% from 2008.
- In 2009, 54.5% of businesses in Baltimore City can be considered to be small and successful businesses. These firms have 50 or fewer employees and are more than four years old. The CSAs with the greatest percentage of small and successful businesses is Cherry Hill (65.9%) followed by Edmonson Village (65.0%).
